

Summary of ILL Exsiccati Specimens

by

J.L. Crane (2011)

Total: 46,768
Fungi: 42,384
Lichens: 1,010
Algae: 2,675
Bryophytes: 699

Specimens in Cabinet 10, W.W. Calkins, **North American Lichens** are not a published exsiccati but rather an important collection of lichens consisting of 1,059 specimens in 21 vols. on acid paper. The collection is disintegrating and in terrible shape. It needs to be placed in acid free packets and distributed in ILL general lichen collection as has been done in several other institutions.

The exsiccati entitled: **Kryptogamae Exsiccatae Editae A Museo Palatino Vindobonensi** (see cabinet 6) is also on acid paper and disintegrating.

The majority of the Exsiccati are not in good shape and will need to be placed in acid free packets with new covers in the near future or risk loosing the collection.

Only the fungi exsiccati have a cumulative card index arranged by binomial, name of exsiccati and specimen number. No such index exists for the algae, lichens or bryophytes. Unless mentioned in the literature by name, exsiccati set and number, it is impossible to locate a particular specimen.

A lichen exsiccati that deserves special mention: **Decades of North American Lichens** (see Cabinet 11). There were only 50 copies of this exsiccatae published and we have a complete set.

Among the algae exsiccati **Phycotheca Boreali-Americani (Algae of North America)** stands out (see Cabinet 12). Only 30 copies were published. Our set is complete with 4 folio volumes and 46 quato volumes, They are in very good shape. This set consists of marine algae from North America and Bermuda.

ILL has a complete set of the **Musci Americani** by T. Drummond published in 1828. See comments under cabinet 14. These may be the oldest exsiccati collections in ILL. Each specimen is represented by a small piece taken from some unknown set. They have name and collection number but lack label data.
